PSYCHOLOGICAL REPORT

Referred by: Prof. Amr Hassan

Name: Ebeid Ahmed Mamdouh

Sex: (*) Male () Female

Date of birth: 12 / 3 / 2013

Age: 12 yrs. 4 mth.

Information resource: His father

COMPLAINT:

- 1) Assessment of ADHD.**
- 2) Assessment of behavioral problems.**

PSYCHOLOGICAL ASSESSMENT:

Previous tests:

.....

.....

Behavior:

A male right handed student, he has normal activity, attentive and cooperative during the session.

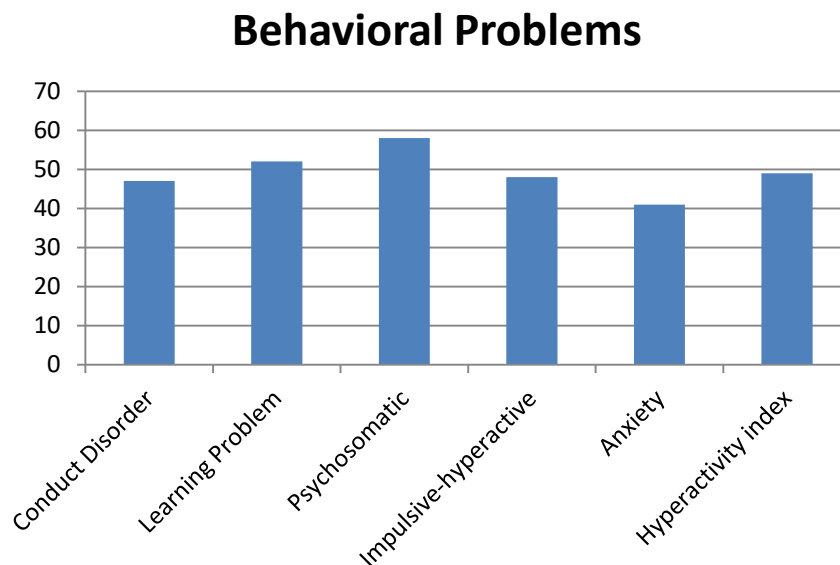

Tests, Results & Assessment:

1	ADHD Symptoms Checklist		
	Sub-tests	Score	Norms
	AD/HD inattentive	54	low

Concerning ADHD symptoms checklist, the student got a low score in AD/HD inattentive which means that he is attentive (according to his father's response).

2	Conner's Parent Rating Scale		
A	Conduct Disorder	47	below average
B	Learning problems	52	average
C	Psychosomatic	58	above average
D	Impulsivity-hyperactive	48	average
E	Anxiety	41	below average
F	Hyperactive Index	49	average

N.B. A clinically high score is above 65

According to Conner's Parent Rating Scale there is no indication that the student has any behavioral problems (according to his father's response).

Conclusions:

Our case has 12yrs., 4mth., male right handed, concerning ADHD symptoms checklist, the student got a low score in AD/HD inattentive which means that he is attentive (according to his father's response).

According to Conner's Parent Rating Scale there is no indication that the student has any behavioral problems (according to his father's response).

Recommendations:

- 1- Family counseling.
- 2- Further psychological investigation to assess I.Q.
- 3- Follow up.

Clinical observation:-

We did not assess hyperactivity because his father confirmed that the student does not suffer from hyperactivity, and this was clear during the session.
