PSYCHOLOGICAL REPORT

Referred by: Prof. Amr Hassan

Name: Noha Ahmed Kaid Sex: () Male (*) Female

Date of birth: 2 / 3 / 2007

Age: 18 yrs. 2 mth.

Information resource: Her mother

COMPLAINT:

1) Assessment of Intellectual ability.

PSYCHOLOGICAL ASSESSMENT:

Previous tests:

.....

.....

Behavior:

A female right handed patient, she was calm, cooperative and inattentive during the session.

She has a speech delay; she spoke in simple words; some of which were unclear during the session. She has echolalia and she has poor eye contact.

She hardly understood very simple instructions of the scale.

Tests, Results & Assessment:

1- Stanford-Binet Intelligence Scale (Version 5)			
Degree of I.Q.	Standard Score	Percentile Rank	Confidence Interval 95%
Non Verbal I.Q.	51 (moderate mental retardation)	1>	47-55

Non- Verbal I.Q.

It represents the sum of the five factor indexes scores measured non-verbally, the score which she obtained classifies her within moderate mental retardation category of intelligence.

Sub tests Scores**1-Non verbal tests**

Sub tests	Standard Score
Fluid Reasoning	1
Knowledge	1
Quantitative Reasoning	1
Visual-Spatial Processing	1
Working Memory	1

N.B. the raw scores are transformed to standard scores with an average of 10 and 3 standard deviation.

Conclusion:

Our case has 18yrs., 2mth., female right handed, her non- verbal I.Q., classifies her within *moderate mental retardation* category of intelligence.

Recommendations:

- 1- She is trainable.
- 2- Conversations sessions are highly recommended.
- 3- Nutrition consultant.
- 4- Family counseling.
- 5- Further psychological investigations to assess adaptive behavior.
- 6- *Follow up*.

Clinical Observation:-

We relied on the non-verbal I.Q. from Stanford-Binet Intelligence Scale because the patient has speech delay.
